DISCLAIMER

FAO specifications are developed with the basic objective of ensuring, as far as possible, that pesticides complying with them are satisfactory for the purpose for which they are intended. However, the Group on Pesticide Specifications of the FAO Panel of Experts on Pesticide Specifications, Registration Requirements, Application Standards and Prior Informed Consent wishes to emphasize that, owing to the complexity of the problem involved, questions such as the suitability of pesticides for the control of a particular pest must be decided at national or provincial level. These specifications should not be assumed to be an endorsement of the use of a particular compound for a given purpose by either the Group of Experts or FAO.

Accordingly, neither the Food and Agriculture Organization of the United Nations (FAO) nor the members of the Group on Pesticide Specifications of the FAO Panel of Experts on Pesticide Specifications, Registration Requirements, Application Standards and Prior Informed Consent warrant that pesticides complying with these specifications are suitable for control of any given pest or for use in an particular area.

Furthermore, the preparation and use of pesticides complying with these specifications are not exempt from any safety regulation or other legal or regulatory provision applicable thereto. Neither FAO nor any member of the FAO Group of Experts shall be liable for any injury, loss, damage or prejudice of any kind that may be suffered as a result of the preparation or use of pesticides complying with these specifications.

Additionally, the Group of Experts wishes to warn users of specifications that improper field mixing and/or application of pesticides can result in either a lowering or complete loss of their efficacy. This holds true even in cases where such pesticides comply with the specifications indicated.

Accordingly, the Group of Experts and/or FAO can accept no responsibility for the consequences of improper field mixing and/or application.
INTRODUCTION

From time to time, FAO publishes booklets of specifications for technical materials and related formulations of plant protection products. Revisions of, and additions to, already published specifications will be issued when necessary, but during the interval between editions, revisions may be printed in the FAO Plant Protection Bulletin.

The specifications contained herein have been carefully reviewed and agreed by the Group on Pesticide Specifications of the FAO Panel of Experts on Pesticide Specifications, Registration Requirements and Application Standards after consultations with official government scientists, the pesticides industry through GIFAP (Groupe International des Associations Nationales de Fabricants de Produits Agrochimiques) and, where appropriate, with individual manufactures 1/.

1. Classes of Specifications.

FAO (full) specifications (Code "S"). Specifications that have all necessary requirements together with CIPAC (full) methods, or other collaboratively studied (proven) methods. 2/ and 3/.

FAO Provisional specifications [Code (S)] are those for which more evidence of the necessary parameters is available and where some collaborative study of the methods of analysis has been carried out.
FAO Tentative specifications (Code "ts") are those which have been recommended by FAO as preliminary specifications which are based on minimum requirements. The methods of analysis cited are normally supplied by the manufacturer or may already have been published or be the subject of collaborative work.

Wherever possible, standards for apparatus and common names for pesticides are those approved by the International Standards Organization (ISO).

2. Expression of Active Ingredient Content

- for solids, liquid technical materials, volatile liquids (of maximum boiling point 50°C) and viscous liquids (with minimum kinematic viscosity of $1 \times 10^{-3}$ m$^2$/s at 20°C) the FAO Specification shall be based on g/ kg expression of content;

- for all other liquids the active ingredient content of the product shall be declared in terms of g/kg or g/l at 20°C. If the buyer requires both g/kg and g/l at 20°C, then, in case of dispute, the analytical results shall be calculated as g/kg.

3. Tolerance on Content.

A declared content of active ingredient must be included in all specifications, and one of the problems immediately arising is the level of tolerance acceptable above the nominal figures. The tolerance is influenced by (a) the reproducibility of the method of analysis, (b) the sampling error and (c) the manufacturing variance.

Allowable variations in analytical results (i.e., tolerances in content of active ingredient) with respect to specific pesticide consignments are intended to cover reasonable variations in content of active ingredient. For examples of such permitted tolerances, see the table on page 20 of the Manual.
4. Containers/Packaging.

Containers shall comply with pertinent national and international transport and safety regulations.

- **Technical material, dustable powders and granules**

Containers shall be suitable, clean, dry and as specified, and shall not adversely affect, or be affected by, the product/material, but shall adequately protect it against external conditions.

- **Wettable Powders**

The product shall be packed in suitable, clean, dry containers as specified in the order. The container shall provide all necessary protection against compaction, atmospheric moisture, oxidation, loss by vaporization and/or contamination to ensure that the product suffers no deterioration under normal transit and storage conditions.

The product shall be protected by an adequate moisture barrier. This may be a suitable bag of polyethylene or alternative means of giving equal or better protection.

- **Solutions and emulsifiable concentrates**

Containers shall be lined, where necessary, with a suitable material, or the interior surfaces treated to prevent corrosion and/or deterioration of the contents.

Additional information should be given in all specifications where particular pesticides present problems in packaging.

5. Biological information.

- **Phytotoxicity**

No test can be specified to cover possible phytotoxicity of formulation to all crops. When a crop is not mentioned in the instructions for use, purchasers should check with the supplier that the material is suitable, always provided that such a use is not restricted or legally forbidden.
- **Wetting of crops**

The dilute spray should satisfactorily wet the leaves of the specified crops when used in accordance with the instructions. Test method MT 53.2, CIPAC 1, p. 965 may be useful.

1/ Should national pesticide specifications developed from these approved FAO specifications deviate from them, the national Authority responsible for making such changes is requested to inform the FAO Plant Protection Service of the nature of and the reasons for the modifications.

2/ Methods or analysis and miscellaneous techniques referred to in these specifications have been developed and adopted by CIPAC (Collaborative International Pesticides Analytical Council Ltd.). See CIPAC Handbooks, 1 (1970), 1A (1980), 1B (1983), 1C (1985) and 1D (1988), CIPAC Proceedings 1980 and 1981, obtainable from Black Bear Press Limited, King's Hedges Road, Cambridge CB4 2PQ, England. The page numbers of specific methods are given in brackets in the specifications. A copy of a method not yet published can be obtained from the FAO Plant Protection Service.

3/ Information on standard waters for laboratory evaluation of pesticidal formulations will be found in "CIPAC Monograph 1, Standard Waters and an FAO survey on Naturally Occurring Waters" (1972). Black Bear Press Limited, King's Hedges Road, Cambridge CB4 2PO, England.
SUBMISSION OF DRAFT SPECIFICATIONS TO FAO

Any organization, commercial firm or interested individual is encouraged to submit relevant specifications, or proposals for revision of existing specifications, for pesticide products for consideration and possible adoption by FAO. Correspondence should be addressed to the Pesticides Control Officer, Plant Production and Protection Division, FAO, Via delle Terme di Caracalla, 00100, Rome, Italy.

Specifications which are considered suitable for further processing are assigned priorities and circulated to appropriate organizations and specialists to comment. Comments, together with other relevant information, are then reviewed in detail by the Group on Specifications of the FAO Panel of Experts on Pesticide Specifications, Registration Requirements, Application Standards and Prior Informed Consent. The drafts are converted into FAO Provisional Specifications, or full FAO Specifications.
INFORMATION

COMMON NAME: Diazinon (ISO)

EMPIRICAL FORMULA: C₁₂H₂₀N₂O₃PS

RMM: 304.3

CAS REGISTRY NUMBER: [333-41-5]

CIPAC CODE NUMBER: 15

CHEMICAL NAMES:

0,0-diethyl-0-(2-isopropyl-6-methylpyrimidin-4-yl) phosphorothioate (IUPAC)

0,0-diethyl-0-[6-methyl-2-(1-methylethyl)-4-pyrimidinyl]phosphorothioate (CA)
.1 DESCRIPTION

The material shall consist of diazinon together with related manufacturing impurities and shall be a yellow to brown liquid, free from visible extraneous matter and added modifying agents, other than the stabilizer(s).

.2 ACTIVE INGREDIENT

.2.1 Identity tests (CIPAC H, p. 122)

Where the identity of the active ingredient is in doubt, then it shall comply with at least one additional test.

.2.2 Diazinon [15/1/M/3.3; CIPAC 1A. p. 1199 (Referee methods), CIPAC H, p. 122 or 5/1/M/1.2; CIPAC 1. p.316]

The diazinon content shall be declared (g/kg) and when determined, the content obtained shall not differ from that declared by more than +/- 25 g. (Note 1).

.3 IMPURITIES

.3.1 0,S-TEPP* (Note 2)

Maximum: 0.2 g/kg

.3.2 S,S-TEPP* (Note 3)

Maximum: 2.5 g/kg

* Methods available from the Plant Protection Officer, FAO Plant Production and Protection Service.
.3.3 Water [MT.30.1.CIPAC 1. p.897 (Referee Method) or MT.30.2. p. 899]

Maximum: 0.6 g/kg

.3.4 Acetone insolubles [MT 27; CIPAC 1. p. 894]

Maximum: 1.5 g/kg

.4 PHYSICAL PROPERTIES

.4.1 Acidity [MT 31.1.1; CIPAC 1. p. 903 or 31.2.1. p. 905]

Maximum: 0.3 g/kg calculated as H₂SO₄.

NOTE 1. A stabilizer may be present (maximum 100g/kg) then the diazinon content of the remainder of the material (i.e. excluding the stabilizer) shall be not less than 950 g/kg.

NOTE 2. The IUPAC name is 0₀₀₀’₀’-tetraethyl-thiopyrophosphate, in C.A. usage: thiodiphosphoric acid ((HO)₂P(O)OP(S)(OH)₂) tetraethyl ester [645-78-3].

NOTE 3. The IUPAC name is 0₀₀₀ ’₀’-tetraethyl dithiopyrophosphate; in C.A. usage: thiodiphosphoric acid ([(HO)₂P(S)]₂O) tetraethyl ester [3689-24-5]
DIAZINON WETTABLE POWDERS

.1 DESCRIPTION

The material shall consist of a homogenous mixture of technical diazinon [complying with the requirements of FAO Specification 15/TC/S(1988)], together with carriers and any necessary formulants. It shall be in the form of a fine, free-flowing powder, free from visible extraneous matter and hard lumps.

.2 ACTIVE INGREDIENT

.2.1 Identity tests (CIPAC H, p. 122)

Where the identity of the active ingredient is in doubt, then the isolated active ingredient shall comply with at least one additional test.

.2.2 Diazinon [15/2/M/2.3. CIPAC 1A. p. 1200 (Referee Method), CIPAC H, p. 122 or 15/2/M/1.2. CIPAC 1. p. 320]

The diazinon content shall be declared (g/kg) and when determined, the content obtained shall not differ from that declared by more than +/- 10%.

.3 PHYSICAL PROPERTIES

.3.1 pH of aqueous dispersion [MT.75.2. CIPAC 1A. p. 1590]

Minimum: 7.0. Maximum: 10.5.

.3.2 Dry sieve test [15/2/M41.4 CIPAC 1. p. 321]

Maximum: 5% retained on a 75 µm test sieve.

* Methods available from the Plant Protection Officer, FAO Plant Production and Protection Service.
Not more than \(0.015 \times x\)% of the mass of the sample used for the determination shall be present on diazinon in the residue on the sieve, where \(x\) is the diazinon content (g/kg) found under 2.2 (Note 1).

.3.3 Flowability [MT.44. CIPAC 1A. p. 1567]

If required, maximum flow number: 12.
In the absence of proven methodology, this clause is for information only.

.4 STORAGE STABILITY

.4.1 Stability at 54 C [MT.46.1.4. CIPAC 1. p. 953]

After storage at 54 +/- 2°C for 14 days, the product shall continue to comply with 2.2 (except that the minimum permitted diazinon content shall be 90% of that found under 2.2 for dustable powders containing over 3%, and 80% for dustable powders containing less than 3% diazinon) and with 3.1, and 3.2.

NOTE 1. If the product has a found content of 50 g/kg diazinon and 20 g of sample is used in the test, then the amount of diazinon in the residue on the sieve, should not exceed 0.15 g, i.e.

\[
\frac{(0.015 \times 50) \times 20}{100} \quad \text{g}
\]
DIAZINON WETTABLE POWDERS
FAO Specification 15/WP/S 1988)

.1 DESCRIPTION

The material shall consist of a homogeneous mixture of technical diazinon [complying with the requirements of FAO specification 15/TC/S (1988)] together with filler(s) and any other necessary formulants. It shall be in the form of a fine powder, free from visible extraneous matter and hard lumps.

.2 ACTIVE INGREDIENT

.2.1 Identity tests (CIPAC H, p. 122)

Where the identity of the active ingredient is in doubt, then the isolated active ingredient shall comply with at least one additional test.

.2.2 Diazinon [15/3/M/2.3. CIPAC 1A. p. 1201 (Referee Method) CIPAC H, p. 122 or 15/3/M/1.2 CIPAC 1. p. 323]

The diazinon content shall be declared (g/kg) and when determined, the content obtained shall not differ from that declared by more than the following amounts:

<table>
<thead>
<tr>
<th>Declared content</th>
<th>Permitted tolerance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 500 g/kg</td>
<td>+/- 5% of the declared content</td>
</tr>
<tr>
<td>Above 500 g/kg</td>
<td>+/- 25 g</td>
</tr>
</tbody>
</table>

* Method available from the Plant Protection Officer, FAO Plant Production and Protection Service.
.3 PHYSICAL PROPERTIES

.3.1 pH of aqueous dispersion [MT.75.2. CIPAC 1A, p. 1590]

Minimum: 7.0
Maximum: 10.5

.3.2 Wet sieve test [MT.59.3 CIPAC 1. p. 981]

Maximum: 2% retained on a 75µm test sieve.

.3.3 Suspensibility [15/3/M/2.6. CIPAC 1A p. 1201 (Notes 1 and 2)]

A minimum of 50% of the diazinon content found under .2.2, shall be in suspension after 30 min. in CIPAC Standard Water C.

Alternatively, if the buyer requires other CIPAC Standard Waters to be used, then this shall be specified when ordering.

.3.4 Persistent foam [MT.47. CIPAC 1. p. 954]

Maximum: 25 ml after 1 min.

.3.5 Wetting of the product [MT.53.3.1 CIPAC 1 p. 967]

It shall be completely wetted in 1 min. without swirling.

.4 STORAGE STABILITY

.4.1 Stability at 54°C [MT.46.1.1. CIPAC 1 p. 951]

After storage at 54 +/- 2°C for 14 days the product shall continue to comply with .2.2, (except that the minimum permitted diazinon content shall be 90% of that found under .2.2, .3 and .3.2).
NOTE 1. The product should be tested at the highest and lowest rates of use recommended by the supplier, provided this does not exceed the conditions given in the method.

NOTE 2. This test will normally only be carried out after the heat stability test (4.1).

NOTE 3. The amount of sample to be used in the test should be specified.
DIAZINON SOLUTIONS

.1 DESCRIPTION

The material shall consist of a solution technical diazinon [complying with the requirements of FAO Specification 15/TC/S (1988)], together with any necessary formulants. It shall be free from visible suspended matter and sediment.

.2 ACTIVE INGREDIENT

.2.1 Identity tests (CIPAC H, p. 122)

Where the identity of the active ingredient is doubt, then the isolated active ingredient shall comply with at least one additional test.

.2.2 Diazinon [15/4/M/2.4. CIPAC 1A. p. 121 (Referee Method) or CIPAC H, p. 122, or 15/4/M41.3. CIPAC : p. 325]

The diazinon content shall be declared (g/l at 20°C or g/kg. Note 1) and when determined, the content obtained shall not differ from that declared by more than the following amounts:

<table>
<thead>
<tr>
<th>Declared content</th>
<th>Permitted tolerance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 200 g/l or g/kg</td>
<td>+/- 10% of the declared content</td>
</tr>
<tr>
<td>Above 200 g/l or g/kg</td>
<td>+/- 20 g</td>
</tr>
</tbody>
</table>

.3 IMPURITIES

.3.1 0,S-TEPP * (Note 2)

Maximum: 0.22 x x mg/kg where x is the diazinon content found under 2.2 (Note 3).

.3.2 S,S - TEPP *(Note 4)

Maximum = 2.8 x x mg/kg where x is content found under 2.2 (Note 5).

.3.3 Water [MT.30.1. CIPAC 1. p. 897]

Maximum: 2 g/kg

.4 PHYSICAL PROPERTIES

.4.1 Acidity (Note 6)

Maximum: 0.5 g/kg, calculated as H₂SO₄.

.4.2 Flash point [MT.12. CIPAC 1. p. 846]

If required the flash point of the product shall be not lower than the minimum declared flash point. A closed cup method shall be used and the method stated (Note 7).

.4.3 Miscibility with hydrocarbon oil [MT.23. CIPAC 1. p. 891] (Note 8)

If required, the product shall be miscible with the appropriate hydrocarbon oil.

.5 STORAGE STABILITY

.5.1 Stability at 0°C [MT.39.1. CIPAC 1. p. 930]

After storage at 0 +/-1°C for 7 days, the volume of solid and/or liquid which separates shall be not more than 0.3 ml.

* Methods available from the Plant Protection Officer, FAO Plant Production and Protection Division.
.5.2 Stability at 54°C [MT.46.1.3. CIPAC 1. p. 952]

After storage at 54 +/- 2°C for 14 days in a closed container, the product shall continue to comply with .2.2 (except that the minimum permitted diazinon content shall be 85% of that found under .2.2) .3.1, .3.2 and .4.1.

NOTE 1. If the buyer requires both g/l at 20°C and g/kg, then in case of dispute, the analytical results shall be calculated as g/kg.

NOTE 2. The IUPAC name is 0,0,0',0'-tetraethyl-thiopyrophosphate; in C.A. usage: thiodiphosphoric acid ((HO)₂P(O)OP(S)(OH)₂) tetraethyl ester [645-78-3].

NOTE 3. On a diazinon content of 100 g/kg, the maximum permitted 0,S-TEPP content would be 0.22 x 100 = 22 mg/kg in the material.

NOTE 4. The IUPAC name is 0,0,0',0'-tetraethyl dithiopyrophosphate, in CA usage: thiodiphosphoric acid ([HO₂P(S)]₂0)tetraethyl] ester.

NOTE 5. On a diazinon content of 100 g/kg, the maximum permitted 0,S-TEPP content would be 2.8 x 100 = 280 mg/kg in the material.

NOTE 6. The method MT.31.1.3. CIPAC 1. p. 904 or 31.2.3 p. 905 have not been tested on this type of formulation but maybe used as a starting point for further development.

NOTE 7. Attention is drawn to the appropriate national and international regulations on handing and transport of flammable materials.

NOTE 8 The concentration should not be higher than the highest concentration recommended in the instructions for use.
DIAZINON EMULSIFIABLE CONCENTRATES

.1 DESCRIPTION

The material shall consist of technical diazinon [complying with the requirements of FAO Specification 15/TC/S(1988)] dissolved in suitable solvents and with other necessary formulants. It shall be in the form of a stable liquid free from suspended matter and sediment.

.2 ACTIVE INGREDIENT

.2.1 Identity tests (CIPAC H, p. 122)

Where the identity of the active ingredient is in doubt, then the isolated active ingredient shall comply with at least one additional test.

.2.2 Diazinon [15/5/M/2.4. CIPAC 1A. p. 1203 (Referee method), CIPAC H, p. 122 or 15/5/M/1.3, CIPAC 1. p. 328]

The diazinon content shall be declared (g/l at 20°C or g/kg. Note 1) and when determined, the content obtained shall not differ from that declared by more than the following amounts:

<table>
<thead>
<tr>
<th>Declared content</th>
<th>Permitted tolerance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 500 g/l or g/kg</td>
<td>+/- 5% of the declared content</td>
</tr>
<tr>
<td>Above 500 g/l or g/kg</td>
<td>+/- 25 g</td>
</tr>
</tbody>
</table>

.3 IMPURITIES

.3.1 0,S-TEPP* (Note 2)

Maximum: 0.22 x x mg/kg where x is the diazinon content found under .2.2 (Note 3).
.3.2 S,S-TEPP* (Note 4)

Maximum: 2.8 \(x\) mg/kg where \(x\) is the diazinon content found under .2.2 (Note 5).

.3.3 Water [MT.30.1. CIPAC 1. p. 897]

Maximum: 2 g/kg

.4 PHYSICAL PROPERTIES

.4.1 Acidity [MT.31.1.3. CIPAC 1. p. 904 or 31.2. p. 905]

Maximum: 0.5 g/kg calculated as \(\text{H}_2\text{SO}_4\).

.4.2 Emulsion stability and Re-emulsification [MT.36.1.1. CIPAC 1. p. 910]

After the Heat Stability test (.5.2), the product when diluted at 30°C (Note 6) with CIPAC Standard Water A and C, shall comply with the following:

<table>
<thead>
<tr>
<th>Time after dilution</th>
<th>Limits of Stability</th>
</tr>
</thead>
<tbody>
<tr>
<td>0h</td>
<td>Initial emulsification, complete</td>
</tr>
<tr>
<td>0.5 h</td>
<td>Cream, maximum 1 ml</td>
</tr>
<tr>
<td>2 h</td>
<td>Cream, maximum 4 ml</td>
</tr>
<tr>
<td></td>
<td>Free oil, nil</td>
</tr>
<tr>
<td>24 h (note 7)</td>
<td>Re-emulsification, complete</td>
</tr>
<tr>
<td>24.5 h (note 7)</td>
<td>Cream, maximum 4 ml</td>
</tr>
<tr>
<td></td>
<td>Free oil, maximum 2 ml</td>
</tr>
</tbody>
</table>

In special cases, a test using CIPAC Standard Waters A and C before the heat stability test, may be necessary.

Alternatively, if the buyer requires other CIPAC Standard Waters to be used, then this shall be specified when ordering.

**.4.3 Flash point [MT.12. CIPAC 1. p. 846]**

If required, the flash point of the product shall be not lower than the minimum declared flash point. A closed cup method shall be used and the method stated (Note 8).

**.5 STORAGE STABILITY**

**.5.1 Stability at 0°C [MT.39.1. CIPAC 1. p. 930]**

After storage at 0 +/-1°C for 7 days, the volume of solid and/or liquid which separates shall be not more than 0.3 ml.

**.5.2 Stability at 54°C [MT.46.1.3. CIPAC 1. p. 952]**

After storage at 54 +/-2°C for 14 days in a closed container, the product shall continue to comply with .2.2 (expect that the minimum permitted diazinon content shall be 908 of that found under .2.2), .3.1, .3.2 and .4.1.
NOTE 1. If the buyer requires both g/l at 20°C and g/kg, then in case of dispute, the analytical results shall be calculated as g/kg.

NOTE 2. The IUPAC name is \(\text{0,0',0',0'}\)-tetraethyl thiopyrophosphate; in CA usage thiodiphosphoric acid ((HO)\(_2\)P(O)OP(S)(OH)\(_2\)) tetraethyl ester [645-78-3].

NOTE 3. On a diazinon content of 400 g/kg, the maximum permitted 0,S-TEPP content would be \(0.22 \times 400 = 88\) mg/kg in the material.

NOTE 4. The IUPAC name is \(\text{0,0',0',0'}\)-tetraethyl dithiopyrophosphate; in CA usage: thiodiphosphoric acid ([\((\text{HO})_2\text{P(S)}\)]\(_2\)O) tetraethyl ester [3689-24-5].

NOTE 5. On a diazinon content of 400 g/kg, the maximum permitted S,S-TEPP content would be \(2.8 \times 400 = 1.120\) mg/kg in the material.

NOTE 6. Unless another temperature is specified.

NOTE 7. These tests need only be carried out in case of doubt as to the emulsion stability result of the 2 hour test.

NOTE 8. Attention is drawn to the appropriate national and international regulations on handling and transport of flammable material.
